

agapie group inorganic organometallic and bioinorganic - with mixed metal oxides as catalysts for water oxidation and o₂ reduction in heterogeneous and biological systems fundamental understanding of the effects of redox inactive metals on the chemistry of mixed metal oxide clusters is important for the rational development of effective catalysts prior to our work a single high oxidation state complex displaying an oxo bridged redox active, **homogeneous catalysis mechanisms and industrial** - over the last decade the area of homogeneous catalysis with transition metal has grown in great scientific interest and technological promise with research in this area earning three nobel prizes and filing thousands of patents relating to metallocene and non metallocene single site catalysts asymmetric catalysis carbon carbon bond forming metathesis and cross coupling reactions
